

# Front rack installation manual - Amsterdam+

This step-by-step manual will guide you through the installment of your LEKKER front carrier on your Amsterdam GT. You will need allen keys sizes 4mm and 5mm, a crosshead screwdriver and a 8mm wrench.

Please note: For the proper installation of the front rack, you need to remove the front light from its original holder and attach it to a longer version (see picture to the right). This holder is unfortunately only available from the 2nd week of August onwards. We will ship you the holder separately. Once you receive this holder, you can install the rack and lamp correctly. We recommend waiting with the installation of your front rack until you receive this holder!

## Step 1

Using **two 5mm allen keys**, loosen and remove the bolt that runs through the front fork and holds your lamp and fender. You can now remove the lamp from the bolt. Make sure that you do not disconnect the cables.

## Step 2

Before the lamp can be reattached, remove it from the original lamp holder using a **cross-headed screwdriver** and a **8mm wrench**. After, attach it to the long, black lamp holder that you received with the carrier (see next step).

### Step 3

Next, re-attach the bolt you have removed in step 1 using the **two 5mm allen keys**. Hook the carrier and the new lamp holder with the mounted lamp onto the bolt before fastening it tightly.

### Step 3

Now, attach the front carrier stays to the carrier using the provided bolt, nut and washers.

### Step 4

To attach the stays to the fork, first remove the bottom black bolt **using a 4mm allen key**. After, attach the carrier stays by inserting and tightening this bolt again.

## **Congratulations,**

You have now successfully installed your LEKKER bikes front carrier and re-located the lamp accordingly. The lamp will shine through the gap of the rack, making you clearly visible while illuminating the LEKKER logo!
